

WHY ENERVIEW? OUR ATTENTION TO DETAIL MAKES ALL THE DIFFERENCE.

Finger latches
The profile design allows the latch to be placed inside the sash frame for ease of operation when tilting the windows in for cleaning.

Drainage flaps
Unlike other companies that punch holes for drainage, we utilize flaps that only open when water is required to drain.

Four point fusion mitred sash and frame

Full pull rail
Solid vinyl pull rail provides added strength while giving you the maximum length for a full range of usage when operating the window. Provided on all EnerView Hung and Slider windows.

Heavy duty cam lock & keeper
For added security.

Night latches
Night latches on double hung and double sliders allow windows to be opened for ventilation, while providing the added security of not being able to fully open the window without force. The latches also act as a child safe feature, preventing the window from being accidentally opened without disengaging the latch.

Accessories
Aesthetic options including Colonial couplers, Colonial Brick Mould, Georgian Grills, Vinyl casings with rosettes will add an extra touch of class to your windows.

Optional Colonial coupler
Optional Colonial couplers used to join multiple windows together provide a modern window with a classic look, which enhances any home.

Multi-chamber design helps prevent mould and mildew.

EnerView's advance frame is constructed from lead-free 100% virgin vinyl known as Multi-Chamber Polyresin 3 PVC. It is engineered to draw moisture away from the window reducing condensation and the formation of mould and mildew.

Fly maze keeps insects out.

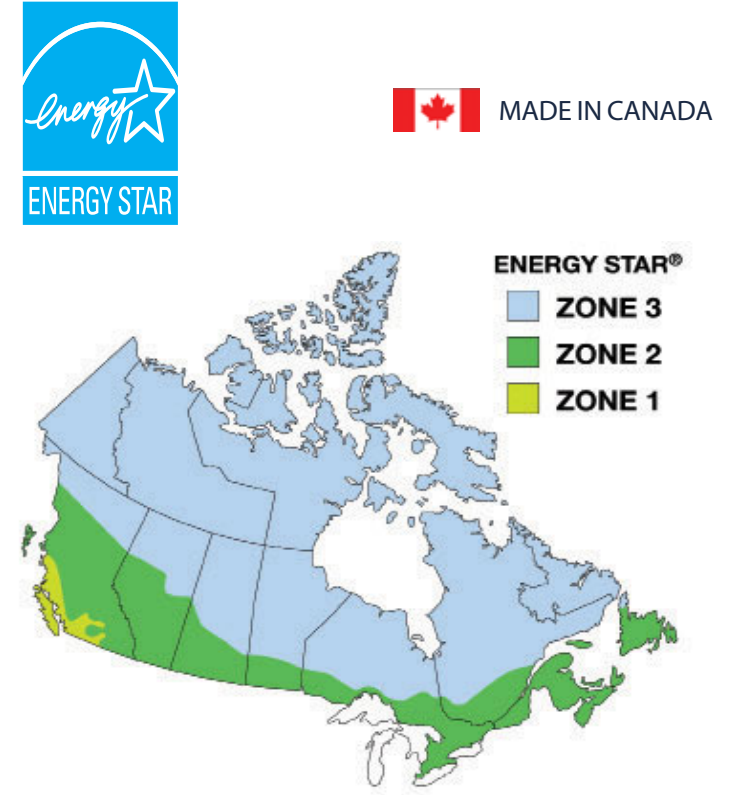

Our proprietary fly maze design incorporates an invisible sponge-like material in the vinyl frame. This eliminates the possibility of insects entering through the drainage openings.

Colonial Glass Stop offers unique style.

Enjoy our exclusive Colonial Glass Stop, which provides an elegant curved finish, further differentiating our windows from competitors.

ENGINEERED TO KEEP YOU COMFORTABLE AT ALL TIMES

Glass is approximately 75% of the exposed area of a window, so it plays an important role in determining energy efficiency and the comfort level in your home. Our EnerView Glass module is comprised of one or more glazing coatings that are sealed around the outside edge to better insulate your home from extreme weather, minimize condensation, reduce noise levels and help you save on energy costs.

WE'VE GOT YOU COVERED, WHEREVER YOU LIVE
Windows with EnerView glass coatings are ENERGY STAR® qualified for our geographic region. Our standard 180 glass package carries a Zone 1, 2 or 3 rating depending on the style of window. Windows with interior grids can carry a lower rating

PVC Windows to CAN/CSA Standard A440-00 and A440.2-04

LoE / Argon	ENERGY STAR® Rating	CSA Ratings
Casement/Awning	2	A3, B7, C5
Single Hung	2	A3, B5, C4
Double Hung	2	A3, B7, C3
Slider Lift Out	2	A3, B3, C3
Slider Tilt	2	A2, B2, C3
Fixed Picture	3	Fixed, B7, C5

BUILT FOR CANADIAN WEATHER

EnerView glass options are designed and engineered using advanced technology. This not only keeps the harsh elements outside from affecting the comfort of your home inside, but saves you money by conserving energy while keeping your home protected from unhealthy mould and mildew. Our EnerView Low emissivity (LoE) glass and gas fill options allow you to customize your windows to increase your comfort while saving on energy costs.

THE TEST OF GREAT DESIGN WHEN ENERGY AND VISION COMBINE

The name "EnerView" derives from the combination of the two most important elements of a window, "Energy Efficiency and The View" or look of the window:

"Ener" is short for Energy. This represents our continual commitment to producing the most "Energy Efficient" window system possible. Research and Development is the cornerstone of our business. We work closely with our manufacturer to develop the most energy efficient glass possible. All of our windows are Energy Star certified and surpass the requirements for our region of Canada. However, for those that seek even higher performance and window ratings, additional options such as Triple Glazing and Krypton Gas are available providing the highest Energy Star performance possible.

"View" denotes the quality of the view or look of our windows. Our Standard window is provided with our Neat® Glass package - "The glass that practically cleans itself". This ensures the best possible VIEW through the glass on a daily basis.

Our screens come in clear or hideaway tabs so as to not impede the view, and provide the best sight lines from inside or outside the home. Further, our custom shaped glass stops give an Architectural look to the windows.

We also carry a variety of accessory trims that can further enhance the look of your windows. These include high profile, Architectural couplers that join two or more windows together, colonial style brick molds for around the perimeter of your windows and specialty grills between the glass.

Finally our strongest feature is our "WORRY FREE" non-prorated transferable warranty that covers 100% of the window (Frame, Glass and Hardware). Additionally, we provide a 5-year Glass Breakage Warranty that covers replacement glass for any reason.

THE ENERVIEW GLASS ADVANTAGE

Standard glass will permit your home to gain heat in the summer and lose heat in the winter, making energy consumption less efficient and expensive. EnerView adds a LoE (low emissivity) coating to improve the insulating value of your windows by nearly 40%. Our EnerView glass is produced with a patented LoE coating technology which filters out heat from the sun in the summer and allows the sun's natural energy in during the winter.

The result: Year-round comfort.

When it's cold...

When it's warm...

IN WINTER, the higher the indoor glass temperature of your window, the greater your comfort. A LoE treated window will feel warmer to the touch because it prevents interior heat from escaping by reflecting it back into the room.

IN SUMMER, LoE glass filters out the heat from the sun, helping to keep your home cooler.

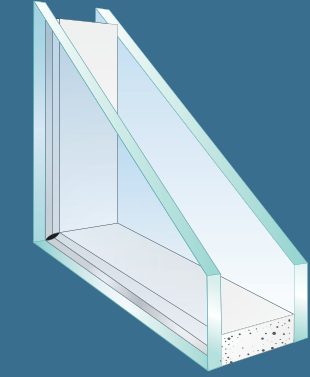

WINDOW CONDENSATION is a problem that not only obstructs visibility but can stain and deteriorate window finishes. This can create a breeding ground for mould, mildew and other allergens. Condensation occurs when the moisture present in the air inside your home changes from vapour to water on contact with a colder window surface. EnerView's LoE coating helps to increase the interior temperature of the glass, thus increasing resistance to condensation.

HOW ENERVIEW LoE GLASS WORKS ITS MAGIC

The heat generated inside your home is known as Long Wave Radiation. This type of useful radiation should be contained in each room as best as possible, while UV rays and other unwanted radiation from the sun should be shielded and reflected back outside. EnerView's LoE glass achieves this by significantly improving the insulating value of your windows.

DOUBLE-PANE OR TRIPLE? A GUIDE TO HELP YOU DECIDE

DOUBLE-PANE

EnerView-180 provides a good balance between blocking solar heat and harmful rays in the summer and letting the sun's natural energy in during the winter while providing high levels of visible light. If you are looking for an economical glass, which provides a good balance between summer and winter comfort while reducing energy costs, this is the glass for you.

FOR SPECIFIC RATINGS BY ZONE AND WINDOW OPTIONS, GO TO WWW.OEE.NRCAN.GC.CA

TRIPLE-PANE

Three insulated panes of glass provide year-round performance with the highest degree of solar control possible. In the summer, the special coating on the glass is formulated to block solar heat.

Bay Windows

Bow Windows

"NEAT" GLASS - WINDOWS THAT PRACTICALLY CLEAN THEMSELVES!

It's like having self-cleaning windows! EnerView Neat® Glass coating is applied to glass during production to reduce the need for frequent exterior window cleaning. This coating is activated by sunlight and breaks down organic materials such as dust and other airborne particles, resulting in a much cleaner surface.

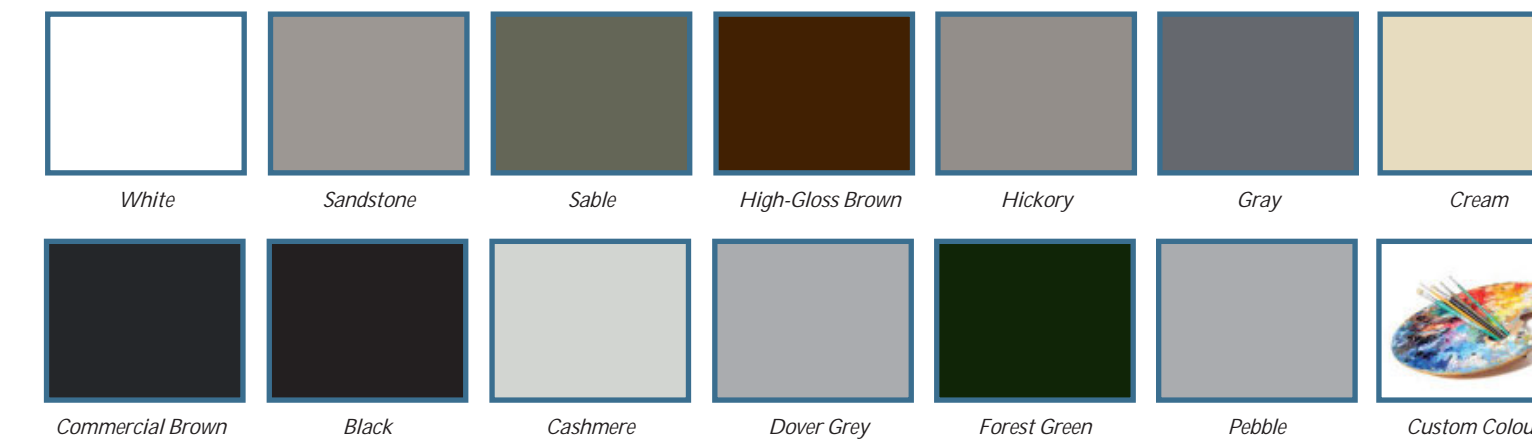

GLASS OPTIONS

Add a unique element to any window with EnerView's Specialty Glass Options. From eye-catching patterns to subtle accents, EnerView Series Windows develop their own personality. The glass is available in various styles and colours. Our glass is also available in Grey, Bronze and Laminated Security glass. Options pictured in panes at right, from top: Pinhead, Sycamore, Glue Chip and Silvet.

COLOURS

All our window frames, grills and accessories are available in thirteen beautiful pre-selected Solar-Bond™ colours. We can also custom colour match any existing decor colour or exterior to suit your individual needs. Our standard polyurethane acrylic paint finishes are weather and fade-resistant with a 15 year Solar-Bond™ Exterior Colour Warranty.

PEACE OF MIND FOR A LIFETIME

For over 30 years, we have stood behind our commitment to provide only the finest materials and workmanship in every EnerView Series product. We back that promise with our exclusive Transferable Lifetime Warranty.

THE ENERVIEW GUARANTEE INCLUDES

- Lifetime Warranty on White Vinyl Frame and Vinyl Sash Members
- Lifetime Warranty on Insulating Glass
- Lifetime Warranty on Hardware
- 15-Year Warranty on Solar Bond™ Paint Standard Colours
- Five-Year Limited Warranty on Glass Breakage
- No charge transfer fee
- Non-prorated

No one is as committed to providing flawless products as EnerView. Due to the relentless pursuit of perfection, not only is every EnerView Window guaranteed for a lifetime and CSA Certified, we also provide our zero defect commitment. This ensures you will never purchase a faulty product.

EnerView does not make an ordinary vinyl window. We demand perfection in ourselves and our product, resulting in a vinyl window you can trust and rely on for the ultimate in home comfort.

HISTORY

Time-tested products from a reputable Canadian company.

EnerView Windows are manufactured in partnership with Vinylbilt Windows and Doors, a company with a 30-year history in window manufacturing. At our engineering and manufacturing facility in Vaughan, Ontario, EnerView has perfected a process designed to provide homeowners with a high quality, reliable, tested and proven vinyl window, which is second to none. Our experience, expertise and meticulous methods allow us to manufacture windows that outperform those of our competitors, under even the most severe weather conditions.

PERFORMANCE

Constant innovation and an attention to detail.

Every EnerView window is custom manufactured, tailored to the exact requirements of your home and designed to perform under the most severe weather conditions. Our stringent quality control process features over 100 checkpoints and a careful attention to detail. This is how we can offer one of the most comprehensive warranties in the industry. Perhaps the best compliment is the fact EnerView windows have earned CSA Certification and meet or exceed ENERGY STAR® specifications.

STYLE

A great looking window that you will be proud to own.

EnerView windows aren't only high performance, they are also pleasing to the eye. Aesthetics is an important element of windows. At EnerView, we are aware how much a window can add to the curb appeal of a home. Our state-of-the-art facility enables EnerView to provide you a window custom fit for your home. Each EnerView window is manufactured to our specific requirements, with multiple checkpoints to ensure the highest quality window is produced as well as delivered on time.

THE TEST OF GREAT DESIGN WHEN ENERGY AND VISION COMBINE

Platinum Home Design & Renovations Inc. has been serving and satisfying consumer's window needs for more than two decades. In our ongoing commitment to excellence and in response to our customer's needs and requests, we have developed a custom designed window... the "EnerView" window system.

The EnerView window has been manufactured with a cutting edge design and enhanced technical efficiency while maintaining and exceeding all industry certifications and government standards.

The EnerView window presents the answer to our customers' concerns with a window that fulfills their need for efficiency, warmth and comfort while achieving a dynamic design and ease of operation.

Our team of expert installers will ensure that all our installations exceed your expectations. We believe that the quality of the installation is equally as important as the product itself. This is why our customers appreciate the value and uncompromising service, which continues to be the foundation of our company.

In neighbourhoods like yours across the city, Platinum has established standards of quality in window installations, which have resulted in thousands of satisfied customers.
